

Waqar Ahmed

Quality Engineer

waqar200028@gmail.com | 778-586-4209 | [linkedin.com/in/wahmed2000](https://www.linkedin.com/in/wahmed2000) | Ottawa, ON

Education: **Bachelor of Applied Science, Electrical Engineering** (Mechatronics Option with Distinction)
University of British Columbia, Okanagan Campus | Sept 2018 – Jun 2023
GPA: 3.7 | Dean's list (2019 - 2023)

Certifications: ISTQB; Foundation Level (CTFL) (In Progress)
POSTMAN; API Testing
LAMBDATEST; Playwright 101

Skills

Quality Engineering & Testing: Test planning, regression testing, feature validation, risk-based testing, release readiness, Alpha/Beta testing, customer-facing validation

Test Automation: Test automation scripting, automation framework contribution, regression automation, Linux command line, log analysis, SDLC, mobile testing iOS and Android, device testing wired and wireless systems

Defect Management & Agile Delivery: Jira defect tracking, prioritization and severity assessment, impact analysis, agile and sprint-based workflows, Confluence documentation

Collaboration & Release Management: Cross-functional collaboration with Product, Software, and Hardware Engineering teams; quality sign-offs; stakeholder coordination, third party vendor collaboration

Documentation & Knowledge Sharing: Test plans, test cases, test coverage documentation, onboarding documentation, mentoring and training

Technical Tools: Playwright, Postman, Jira, Confluence, Linux, GIT, AWS, iOS, Android, Python, JavaScript, Typescript JQL, MATLAB, Arena (PLM)

Professional Experience

Quality Engineer - [Alarm.com](https://www.alarm.com) | Oct 2023 - Present

- Led end-to-end quality engineering for a 10-month customer-facing product launch, owning validation across Alpha, Beta, and Limited Availability phases for feature and firmware releases
- Designed and executed risk based test strategies, analyzing logs and tracking 100+ defects in Jira, prioritizing critical issues to ensure release readiness and product credibility
- Partnered closely with Product Management and Software Engineering to identify and escalate credibility blocking defects, directly influencing feature readiness and go no go release decisions
- Coordinated quality efforts across 3 QE teams, Device Engineering, Software Engineering, Beta, Business, Legal, and international partners, ensuring alignment on quality standards and timelines
- Built and maintained 200+ test cases and product documentation, improving test coverage and accelerating QE onboarding

Software Test Engineer - [Arlo Technologies](https://www.arlotechnologies.com) | Sept 2021 - Sept 2022

- Executed firmware, regression, and mobile testing across 7 product lines including sensors and wired and wireless video devices, using Linux log analysis, iOS, and Android validation to ensure feature stability
- Contributed to test automation repository by maintaining 5 automation scripts that reduced manual testing time by up to 90%
- Supported agile development by documenting and tracking defects using Jira and Confluence, collaborating closely with developers to resolve issues across firmware and mobile platforms, improving sprint efficiency
- Trained and mentored a new intern within a 5 person QE team, enabling full ramp up in under 2 months and ensuring continuity of testing coverage

Capstone Project - Interactive Smart Bin System

- Developed a smart bin system aimed at reducing sorting pressure and decreasing contamination in the campus waste stream
- Utilized Google vision API and a barcode API to develop a highly accurate waste classification model, achieving a balanced accuracy rate of 90%
- Programmed and integrated a diverse range of sensors and actuators, ensuring seamless connectivity and achieving a remarkable system wide delay of less than 5 seconds
- Recognized for exceptional outcomes, securing first place under the interdisciplinary project category
